Zootopia 2005

Culture

Russians are famous for enjoying two of their country's most celebrated indulgences, caviar and vodka, often at the same time. Lucky for them, Caviar contains acetylcholine, which improves alcohol resistance.

History

Sturgeon, the fish that produce Caviar, have roamed the seas since the age of the dinosaurs. These extraordinary fish have been sought-after since 1100 BC, when commercial fisherman began hunting them for their roe and meat. Adding to Caviar's mystique, the delicacy was even mentioned in ancient Greek and Roman literature.

Nutrition

Caviar is not only delicious, but healthy as well . . . a spoonful supplies the daily requirement of the vitamin B-12.

Enjoy Nantucket

Enjoy Nantucket while we do the work . . .
